Automotive Lift Equipment

World-Class Safety and Reliability

Technical Specifications

Type of Lift	Asymmetrical
Type of Equalization	Cable
Lifting Capacity	3500 kg
Capacity Per Arm	875 kg
Overall Width	3628 mm
Width between Columns	2790 mm
Drive-Thru Width	2080 mm
Overall Height	3631 mm
Under Bar Clearance	3419 mm
Height to Lowered Lift Pad	120 mm
Height to Raised Low Lift Pad	225 mm
Front Arm Retracted Length	717 mm
Front Arm Extended Length	1048 mm
Rear Arm Retracted Length	791 mm
Rear Arm Extended Length	1141 mm
Maximum Lifting Height	1930 mm
Lift Time / Lower Time	49 / 45 seconds
Power Supply	380V-415V, 3 Ph, 50/60 Hz 200V-240V, 1 Ph, 50/60 Hz
Hydraulic Oil Specification	ISO 32 10WT
Hydraulic Oil Capacity	10L
Maximum Operating Pressure	207 bar
Primary Safety	Mechanical lock at every 76mm starting at 610mm
Auxiliary Safety	Load holding valve on power rack
Hydraulic Safety	2 cylinders direct, flow restrictors

John Bean SOL 3500 Clear Floor 2-Post Lift

Best in class design of uncompromising quality and safety

Majority of sliding blocks used in the market do not meet CE requirement

John Bean's specially engineered sliding blocks are extremely strong and resistant to wear, reducing maintenance cost and ensuring safety

The lift carriage sliding blocks are made of specially engineered self-lubricating and low maintenance materials - two characteristics that help reduce operating expenses considerably

Quick-release plug ensures safety in case of emergency

- Safe operation using two hands
- Manual lock release
- Emergency stop with key lock to limit use of lift
- Motor overload included
- Hydraulic design with pressure relief system

- Arm Restraint - "sure-fit" teeth engagement with robust design using high strength steel and 25mm thick gears
- Larger restraints and more engagement location for lifting wider range of vehicles
- Designed to be safe and long lasting

CE APPROVED - tested to exact CE standards - able to lift up to 1.5 times rated lifting capacity without permanent deformation

Dual Function Overhead Shut-off

Lifting automatically shuts off at full height, regardless if vehicle touches the safety shut-off bar. This prevents cylinders from dead-heading, causing premature failure of expensive cylinder and power units due to excessive pressure

Height-adjustable pad

High grade steel and reinforced arm reduces flex and arm pad adjustment

Designed for very low pick-up points

Asymmetrical construction combined with the design of the supporting arms provide good door clearance - either in front of or behind the lifting post
